

Cleaning & Care

Phoenix 5000 Series Sinks

Fill your Series 5000 Matte Black or Matte White quartz resin sink, with hot tap water, up to the overflow valve mark.

Add two dishwashing tablets to the hot water in the sink. If you are using a dishwasher tablet that is solid powder rather than liquid, we recommend that you break these up with a wooden spoon, once you have immersed them in the water. Stir the tablets through the water.

Return to the sink 30 minutes later and stir again, ensuring the tablets have completely dissolved and are evenly distributed in the water.

Leave the sink with the water overnight. The next day, drain the water from the sink and wipe with a soft cloth. All stains should now be removed.

If you require further assistance, please complete a warranty claim form, found [here](#).
